DISCLAIMER

Every reasonable effort has been made to ensure that the information provided in this publication is reasonably comprehensive, accurate and clear.

Use FarmOps for **Dry Off**

Two big questions that need to be answered for each cow in the herd.

1. When should she be dried off

2. What treatment should she receive?

FarmOps simplifies these dry off decisions

HERD MANAGEMENT

Milk Recording

The only accurate way of measuring how your herd is performing.

Herd Health

Identify and manage what diseases are limiting your herd.

Pregnancy Testing

Convenient testing through milk recording samples with no extra work or handling of cows with a 95% accuracy.

NEW Milk Recording Lifetime Summary Report

For The First Time:

- **PROFITABILITY** and **PERFORMANCE** of cows are illustrated
- Milk recording lifetime information for the cow is **available after each test**
- Cows can be ranked within herd fairly and accurately on milk recorded lifetime
- Dry days are included to rank cows
- The margin per day brings all of your milk recording data into one figure

Improve Your Profitability With Milk Recording & FarmOps

€ Your best cows ranked quickly, easily & accurately:

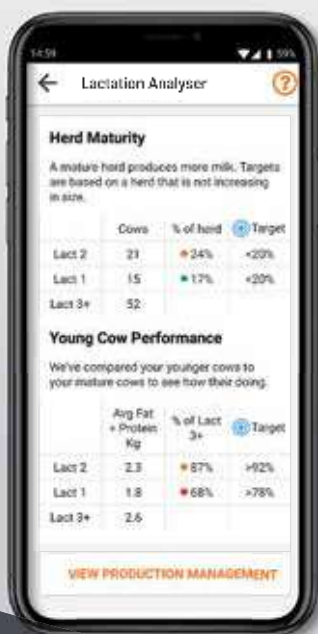

Using our new Milk Recording Lifetime rank, FarmOps makes it easy for you to find your best cows. With the Margin Analyser, find out why your best cows are your best. Is it genetics, days in milk, days dry, SCC?

How much are you feeding your cows? Is it enough?

Should you be feeding 3, 4 or 5kg of nuts in the parlour? Based on your grass/silage input, FarmOps tells you what your average cow needs. You can also see the spread within your herd quickly and easily.

1 2 3 Is each lactation performing?

Only with FarmOps, can you now establish:

- ✓ What is your herd maturity like?
- ✓ Are your 1st and 2nd calvers performing?
- ✓ Which are the non-performing cows in each lactation?

Tackle SCC with the full picture:

For the first time, FarmOps brings SCC & treatments together in one place.

Each cow's SCC & treatment history is clearly presented. High SCC cows are displayed in groups:

-  Cows suitable for treatment.
-  Cows with a poor chance of cure.
-  Cows with lots of cases of mastitis. Review quarter before treating.

Maximise Conception Rates with Sexed Semen

MAXIMIZING CONCEPTION RATES WITH SEXED SEMEN

Sexed semen trials in Ireland have demonstrated a relative conception rate of 80% - if you are achieving 60% conception in cows with conventional, you will on average get 48% with sexed semen. Sexed semen has a lower number of sperm than conventional semen, it has undergone a sorting process and also bulls vary in their conception rates following the sexing process. The variability in sexed semen conception rates is more than double that of conventional semen.

COW SELECTION:

- Select cows that are retaining for 2023 and want replacement heifers from and that have the highest chance of conception.
- Cows calved 60 to 90 days – the higher your 6-week calving rate the greater your choice.
- Parity 1 to 4 – Younger cows have higher conception - Careful with some 1st calvers if BCS is low and they have not coated off yet.
- BCS 3.0 or greater is ideal.
- Cows with no issues at calving or since calving – Difficult Calving, Milk fever, RFM, Endometritis, Lameness etc.
- Keep intakes maximized during the breeding season – watch the bulk tank - % protein & volume are excellent indicators of energy.

HEIFER SELECTION:

- Heifers – Ensure at Target Weight and BCS greater than 3.
- Heifers cycling regularly – Avoid its use on heifers on their 1st or 2nd cycle.
- Maximize intakes during breeding and for the following month.

HEAT DETECTION AND TIMING OF AI:

- Sexed semen should ideally be used in the 1st 10 days of breeding and no later than the 1st 3 weeks. This is important due to the variability of the product.
- Synchronization has a major role to play in the success of sexed semen - As it allows precise timing of AI, animals can be bred in the 1st week of the breeding season and any repeats can be bred in the 1st month. Use the fixed timed AI synchronisation protocols for cows and heifers.
- Accurate heat detection is crucial – only use sexed semen when you are sure of the heats. Use two methods in heifers – scratch cards and crayons. Use conventional semen when unsure of the heats.
- Ideal time for inseminating with sexed semen is 10 to 20 hours after the start of standing heat.

SEXED SEMEN SELECTION AND HANDLING:

- Use a panel of Sexed Semen Sires avoid the dependence on one or two sires- Spread the risk.
- Sires with superior proven field fertility in conventional semen are better candidates for sexed semen, however it cannot be predicted how bulls perform after the sexing process.
- Thaw the sexed semen in a clean descaled water flask with fresh boiled cooled water changed daily, topped up as required to ensure the straw is fully submerged.
- Thawing temperature 35 to 37 deg C for 45 seconds. Thaw a max of two straws at a time.
- Inseminate animals within 5 minutes of thawing.
Help the technician as much as you can to achieve this.

FLEXIBILITY REQUIRED TO MAINTAIN FERTILITY OF THE HERD:

- Ideal time for inseminating with sexed semen is 10 to 20 hours after the start of standing heat, animals presented for AI that are at the beginning of heat should get conventional semen.
- If you get a poor response to synchronisation and your experienced AI Technician informs you that the animals do not feel right, use conventional semen.
- Spray mark those heifers and cows that have lost their CIDR/PRID prior to removal at the synchronisation protocol for sexed semen and use conventional semen on these animals.
- If we get very severe weather, or the bulk tank is dropping in volume or protein % or if the animals are experiencing a setback switch to conventional semen.

AI TECHNICIAN SERVICE

Our Technician academy is the envy of the industry. Every Technician undergoes an unrivalled training regime before they qualify to go on the road.

- ✓ Reliable 365 Service
- ✓ Technician in every parish
- ✓ No-Inbreeding - Handheld Check
- ✓ Best Genetics
- ✓ Highly trained Technicians
- ✓ Highest standards for best possible results
- ✓ Reduced workload for Herd Owners
- ✓ Greater peace of mind

IMPORTANT UPDATE!

We are moving over to a single Free Phone number for all AI calls. Please note that our existing lines will be discontinued from December 31st 2021 and the below will be the single number to call going forward for all AI calls in all areas.

BEEF SIRES FOR THE DAIRY HERD

○ Exclusively selected for the **Dairy Herd**

○ **Quality Saleable Calves**

○ **No Compromise on Dairy Profitability**

The Complete Package

security of calving ease

short gestation

beef value maximised

Selecting Beef Sires for Your Dairy Herd

1. Decide which breed you wish to use.
2. Select a different sire for your maidens, 2nd calvers, cows and mature cows.
3. Then select the highest beef value within your calving range.

Traits included in the Dairy Beef Index (Spring 2019)

ANGUS

MUNSTER BOVINE

Collectively Improving Farm Life

Giving you access to the world's largest breeding programmes

If you are interested in a bull that is not featured in our brochure from any of our agencies we will do our best to fill your specific requirements.

Orders are placed at the start and middle of each month. Allow 6 weeks for delivery.

Heat Detection Aids

€75

Roll of 100 E-alert patches plus glue

CHINBALL HARNESS (for vasectomised bull)
2.5L paint for harness

€160

FIL TAIL PAINT

€17

DULUX TAIL PAINT

€18

€35

Paintsticks (12 per box)

Heat Detection Tags (available in packs of 50)

€60 PER PACK
