

**MUNSTER**  
BOVINE

Collectively Improving Farm Life

# DAIRY BEEF PROGRAMME 2026

Exceptional Genetics

Proven Performance

Unmatched Peace of Mind

# Genetics designed for high-performance dairy systems—with calves that deliver too.

**Calf value matters more than ever.**

The National Cattle Breeding Centre (NCBC) runs Ireland's largest and most proven dairy-beef breeding programme, backed by rigorous sire selection and the largest dataset on field fertility, calving and carcass traits.

**The goal:** maximise the value of your calf crop without compromising calving ease, milk production or solids.

## 5 Steps to Choosing the Right Sires

**Use these simple steps to select a bull team that delivers predictable, profitable results.**

1. Choose the breed that suits your system.
2. Match calving difficulty % to cow age and lactation number.
3. Use shorter gestation sires at the end of the season.
4. Increase your calf crop value with high BSI sires that increase CBV.
5. Focus on Proven Premium – backed by hundreds of on farm records on fertility, calving ease, gestation and calf quality, removing the uncertainty and delivering repeatable results.

## Simple Guide to NCBC Sires Classification

Our classification system makes complex data ~~genomics, reliability, fertility and performance~~ simple to apply.

# EXCEPTIONAL DAIRY BEEF GENETICS

TO GROW YOUR PROFITS

PROFITABILITY BEGINS WITH MILK SOLIDS

Highest conception rates

Superior Fertility

Easy Calving & Short Gestation

Unrivalled calf quality at 3 weeks

High Calf Beef Value (CBV)

## Making the Right Breeding Decisions! It Comes Down to the Predictability You Need.

Every farm uses a mix of breeding tools – the key is choosing the one that gives you certainty and control during the busiest time of the year.

### Why More Dairy Farmers Are Choosing AI

1.  
Large choice  
of sires to use  
depending on  
parity

2.  
Proven  
calving ease

3.  
Fewer  
empty cows

4.  
Consistent  
calf quality  
from day one

8.  
Better  
planning

7.  
Short  
gestation  
options

6.  
Reliable  
conception  
rates

5.  
Superior  
Genetics

NCBC AI Sires are unrivalled on data reliability, giving you fewer surprises, tighter calving, better calf value and unmatched peace of mind.

NCBC AI SIRES FOR PREDICTABLE RESULTS

# NCBC Dairy Beef Programme

Focussed on sourcing beef bulls that will deliver **calving ease, short gestation** and **quality saleable high CBV calves**.

- Proven for calving ease with over 7,800 records

\*Expected gestation is the expected gestation of progeny when used on cows with an average index for gestation.

\*\*Eligibility for the Dairy Beef Welfare Scheme for calves born in 2027

# WAGYU CALF PRODUCTION

## WARRENDALE WAGYU IRELAND

Founded in the UK in 2017, Warrendale Wagyu has grown to partner with over 800 farmers and manage more than 65,000 cattle. In 2024, Warrendale Wagyu Ireland was established and has been steadily expanding ever since.

With established supply agreements across retail and foodservice sectors, Warrendale Wagyu is actively seeking new dairy farmers to join its growing programme. Delivering Irish dairy farmers a structured, sustainable, and reliable outlet for their calves, supporting long-term profitability and growth.

## BENEFITS OF WAGYU

- Calves with high vigour
- Easy calving
- Free on farm calf collection services
- Fixed price for both male and female calves
- Guaranteed outlet for calves
- Cows go back in calf easier

## PRODUCING WAGYU

We are looking to partner with forward thinking Irish dairy farmers to inseminate the very best wagyu genetics in the world and to give this premium product the best start in life.

Priority is placed on cows with low maintenance scores and herds with exceptional calf husbandry when selecting participants for the programme.

### When will Wagyu be bought?

Wagyu calves have to be 28 days old with a target weight of 45kg before leaving the dairy farm.

### Haulage

A complimentary on-farm collection service is offered to all dairy farmers.

### OUR PRODUCTION CRITERIA:

#### Requirements

- All participating farmers must be part of the ICBF National Genotyping Programme or willing to join.
- Only farmers who are Bord Bia Quality Assured are eligible to supply calves.
- Cows with Jersey genetics are not permitted within this programme.

#### Adequate Colostrum

- All of our dairy farmers are required to administer a minimum of 3 litres of colostrum within the first few hours after birth.

#### First Vaccinations

- All calves must receive their first pneumonia vaccination before leaving their place of birth.

#### DNA, EID, BVD Tagging

- All calves must undergo DNA testing as part of the National Genotype Programme.
- The cost of the DNA tags will be the responsibility of the dairy farmer.
- Calves are not permitted to leave the dairy farm until both BVD and DNA test results have been received and approved.

For more information on our Wagyu production system please contact our Production Manager **Cathal Doyle**:
