COMMERCIAL BEEF VALUE (CBV)

A TOOL TO ESTABLISH THE BEEF MERIT OF CALVES AND CONSEQUENTLY THEIR VALUE

CBV = DBI minus CALVING TRAITS
90% Beef Sub-Index
10% Carbon Sub-Index

The CBV is a value that is available for all cattle that are likely to be finished as beef cattle.

Cattle that have a high CBV will, on average, be faster growing, grade better at slaughter, meet market specifications at a younger age and will not eat as much per kg liveweight gained. Consequently, they are more profitable. Cattle that have a low CBV will, on average, be poor for many of these traits and therefore less likely to be profitable.

High CBV cattle are therefore worth more than low CBV cattle. Knowing whether animals are high or low for CBV allows the buyer to make a much more informed decision about how much should be paid for each.
